

## **Switching to TestFlight**

This readme will advise users on how LetsJab will function in the future.

A few people have argued and fought over the fact that turning on developer mode poses a risk to the device in terms of OPSEC. We acknowledge the shortcomings and thus figure out a way to distribute LetsJab while maintaining the security of your phone.

Moving on, we will be moving on to this method.

Method: You install LetsJab via TestFlight ( Apple official app ). Scan a QR code to join my "Beta" app.

Note that other LetsJab alternatives are still being tested. Maybe LetsJab will die and a new kinda Jab will be born.

All future updates from 17/10/2023 will be pushed ONLY VIA TESTFLIGHT.  
Please update the app from the TestFlight app. ( Machiam app store )

## Transiting to Test Flight

Scan the following QR Code

1:44  
◀ Camera

### Step 1 Get TestFlight

Help developers test beta versions of their apps and App Clips using the TestFlight app. Download TestFlight on the App Store for iPhone, iPad, Mac, Apple TV, Watch, and iMessage. Apple Vision Pro will already have TestFlight installed.

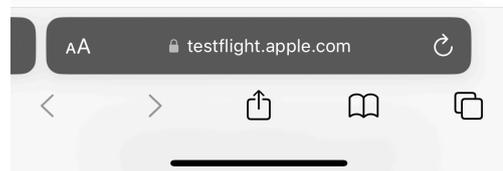

[View in App Store ↗](#)

### Step 2 Join the Beta

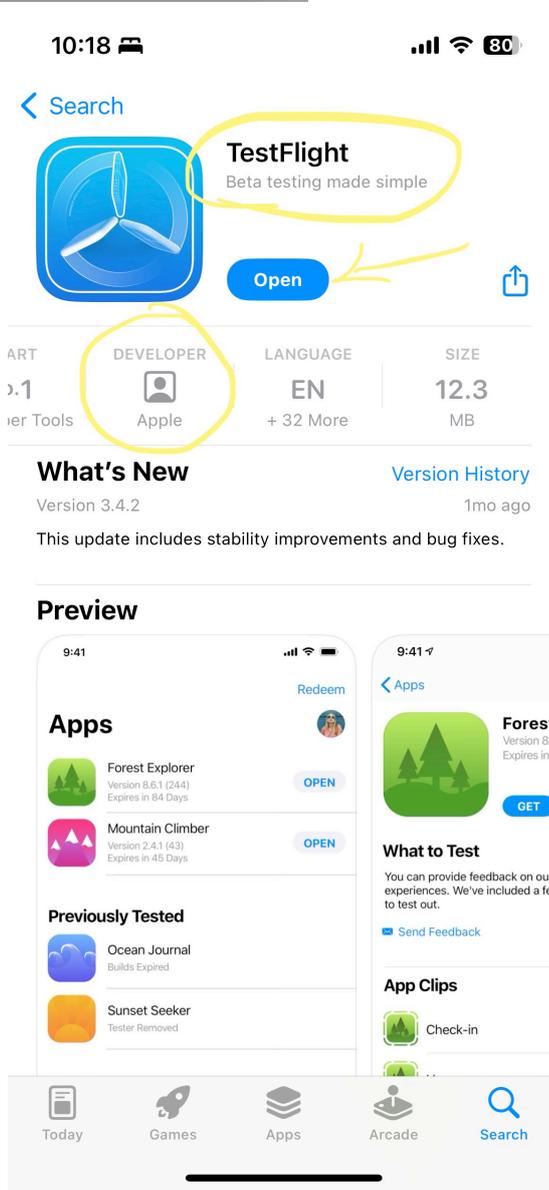

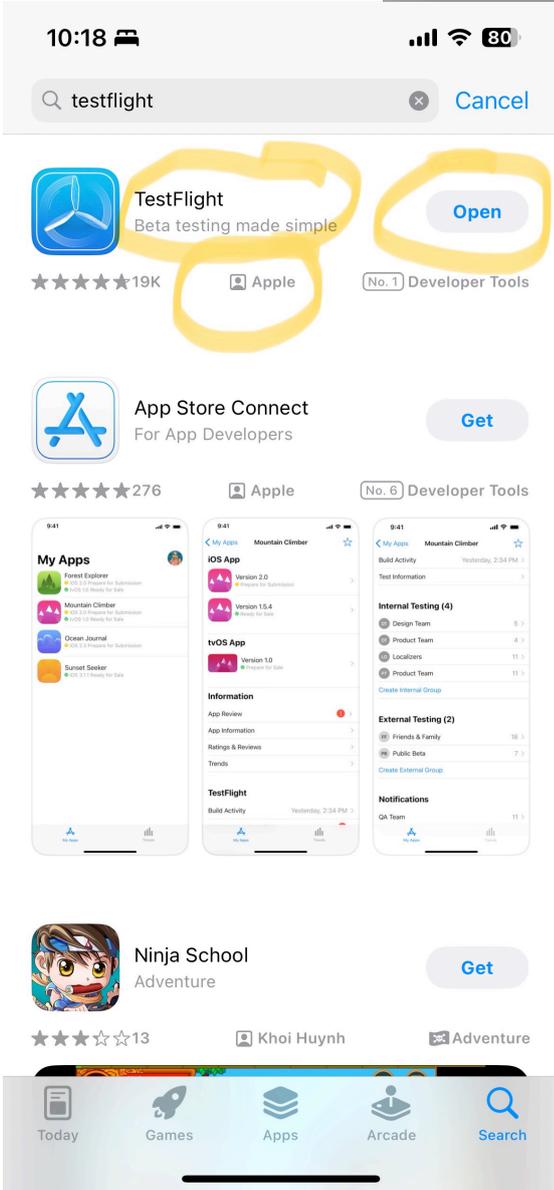

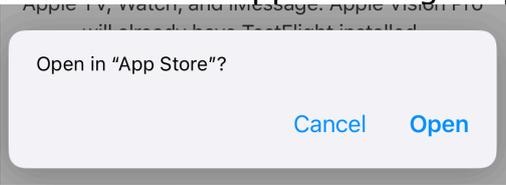

If you already have TestFlight installed on this device, you can start testing now.

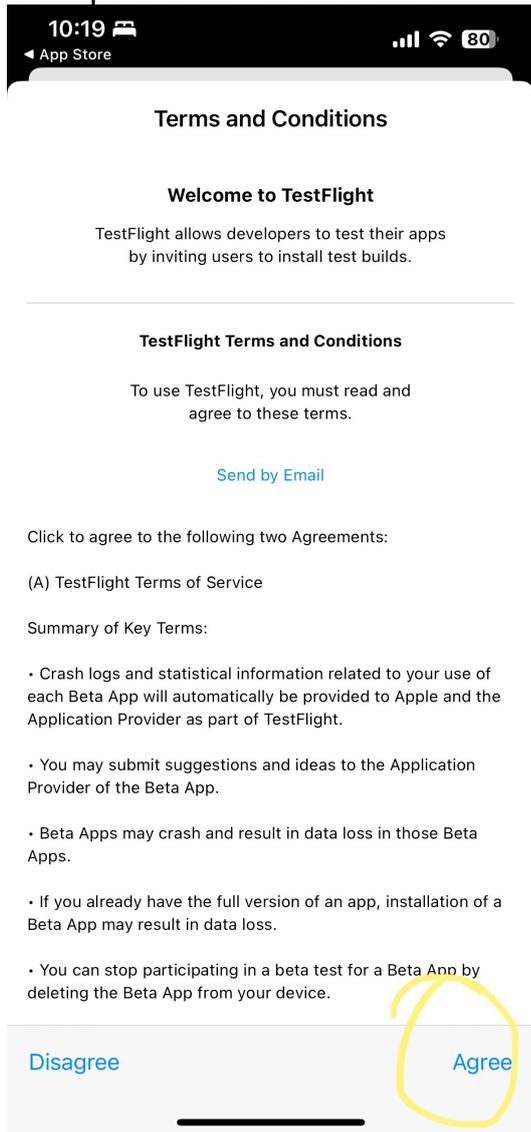

[Start Testing](#)

Step 1 : Click view in App Store to install Test Flight  
Launch your App Store and install the app Test Flight app.

## - Accept the terms and conditions

## Ready To Test

Before you can start testing, a developer has to invite you to test one of their TestFlight apps. To accept an invitation, tap the link in the email or enter the invitation redeem code.

[Redeem](#)

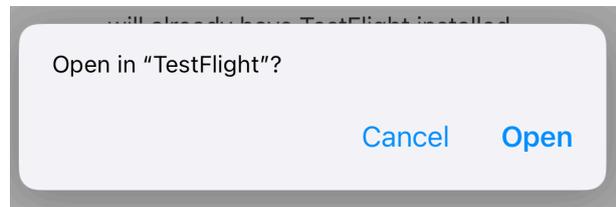

- Go back to the page and click Step 2 Start Testing

## Step 2 Join the Beta

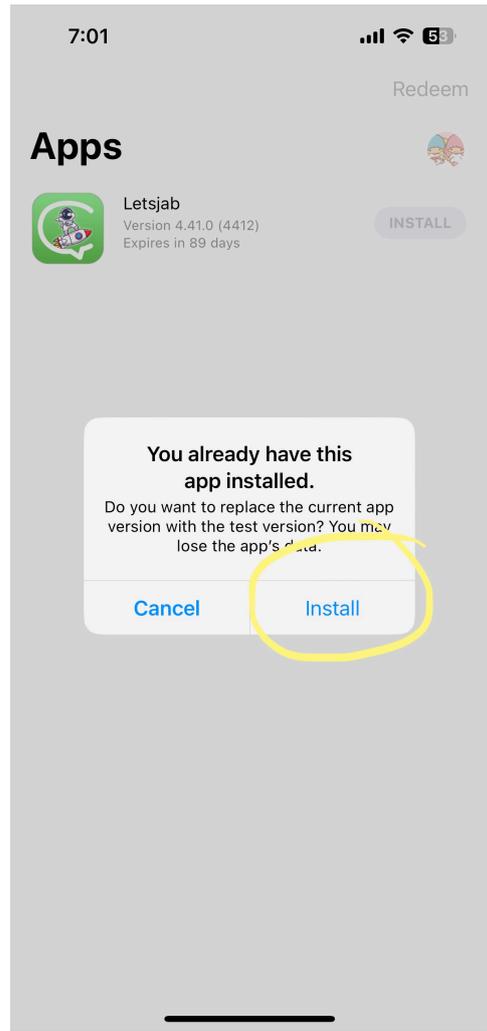

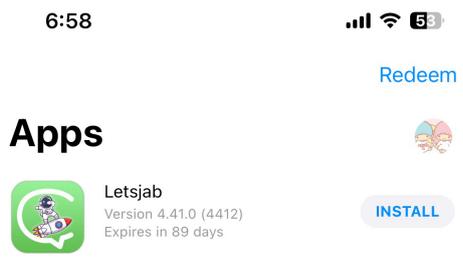

If you already have TestFlight installed on this device, you can start testing now.

Start Testing

Install the App. This will replace your Developer LetsJab version.

## Turn off Developer Mode

Go to Settings > Privacy & Security > Developer Mode > Turn off  
Your LetsJab will still be able to work.
